

In Writing, I, N0DGN, an Amateur General Class since 1980, wish to persuade the FCC to disallow BPL to be implemented, or testing continued. The destruction or at the least, deterioration of the shortwave bands is not only a violation of ITU laws that protect international broadcasters from interference and jamming, it will be destroying many people's life hobby. I am currently living in a community where this is being used/tested. It DEFINITELY does interfere with HF reception from 500 Khz through 32 MHz.

Amateur radio will be reduced to users with high-power amplifiers and large antennas. Emergency communications will be hindered to levels directly responsible for the loss of life. Also, this will hinder military HF comms reducing national security

There are many technologies that make BPL unnecessary. BPL will never be able to carry the high bandwidth demands for mass distribution of video much less the up-and-coming HDTV.

Thank You!
